I'm Carol, owner of Wellbeing Pathways

Passionate about improving health

As a nurse I understand how tinnitus is very real to the person who is experiencing it. Tinnitus can have profound effects on how a person feels and functions. I have seen its effects not just on the person with the condition, but also its impact on relationships and ways of life.

I am a certified and registered clinical hypnotherapist and mindfulness instructor, with additional training to support you live well with tinnitus.

About

Tinnitus takes various forms and varies in severity. Whether it involves a ringing, humming, clicking, or whooshing noise, tinnitus is the perception of sounds when there is no external cause.

Millions of people have tinnitus, a condition where a person hears a sound inside the head. Tinnitus can develop for anyone, and sometimes the cause can be unknown.

Not surprisingly, the condition can interfere with people's ability to sleep. During the day, tinnitus can impair your cognitive function by affecting your ability to control your attention.

While there is no cure, and experiencing tinnitus can be frustrating, self-help techniques to manage the effect of tinnitus on a daily basis can make a positive difference to quality of life, giving you the chance to live well with tinnitus.
